# The basic needs for a website

What is needed to make a website?

**Web hosting** - refers to a space on our server that is rented by clients. This space is where websites are placed so that when someone types in the domain name it will take them to the homepage of that site. There is a certain amount of space and bandwidth allocated for each price option, based on needs. We also offer virtual dedicated servers and dedicated servers for high volume or special needs. Currently basic hosting costs are \$6.50 per month and discounts are available for longer purchase times.

**Domain name** – this refers to the name of the website that you will use for your site. We recommend buying more than a .com address. We recommend buying any extension relevant such as .net or .biz to protect your unique brand. These names are registered by us through ICANN and are renewed yearly for a renewal fee. Currently domain names are \$10.99 per year each for .com names.

**SSL** – this creates a secure connection between your site and any clients or customers who go to certain pages on your site or shopping cart. This is a way to protect information with encryption and build trust. Currently a basic ssl certificate costs \$30.99 per year, which is good for either 1 domain or 1 sub domain.

Generally we need 3 basic items to create a site for a client: Domain name, hosting, and a ssl certificate. We do offer more services that clients can buy in addition to these offerings.

**Discounts: Enter this code at checkout whenever you buy new items**

**100CN15 15% discount off any order \$100 or more**

**50CN10 10% discount off any order \$50 or more**

**5NC25 5% discounts on orders \$25 and over**

**On services including hosting, domains, ssl, and more products. See our products at [123integration.biz](http://123integration.biz)**
